COURSE: DATA SCIENCE

What drives a movie's rating?

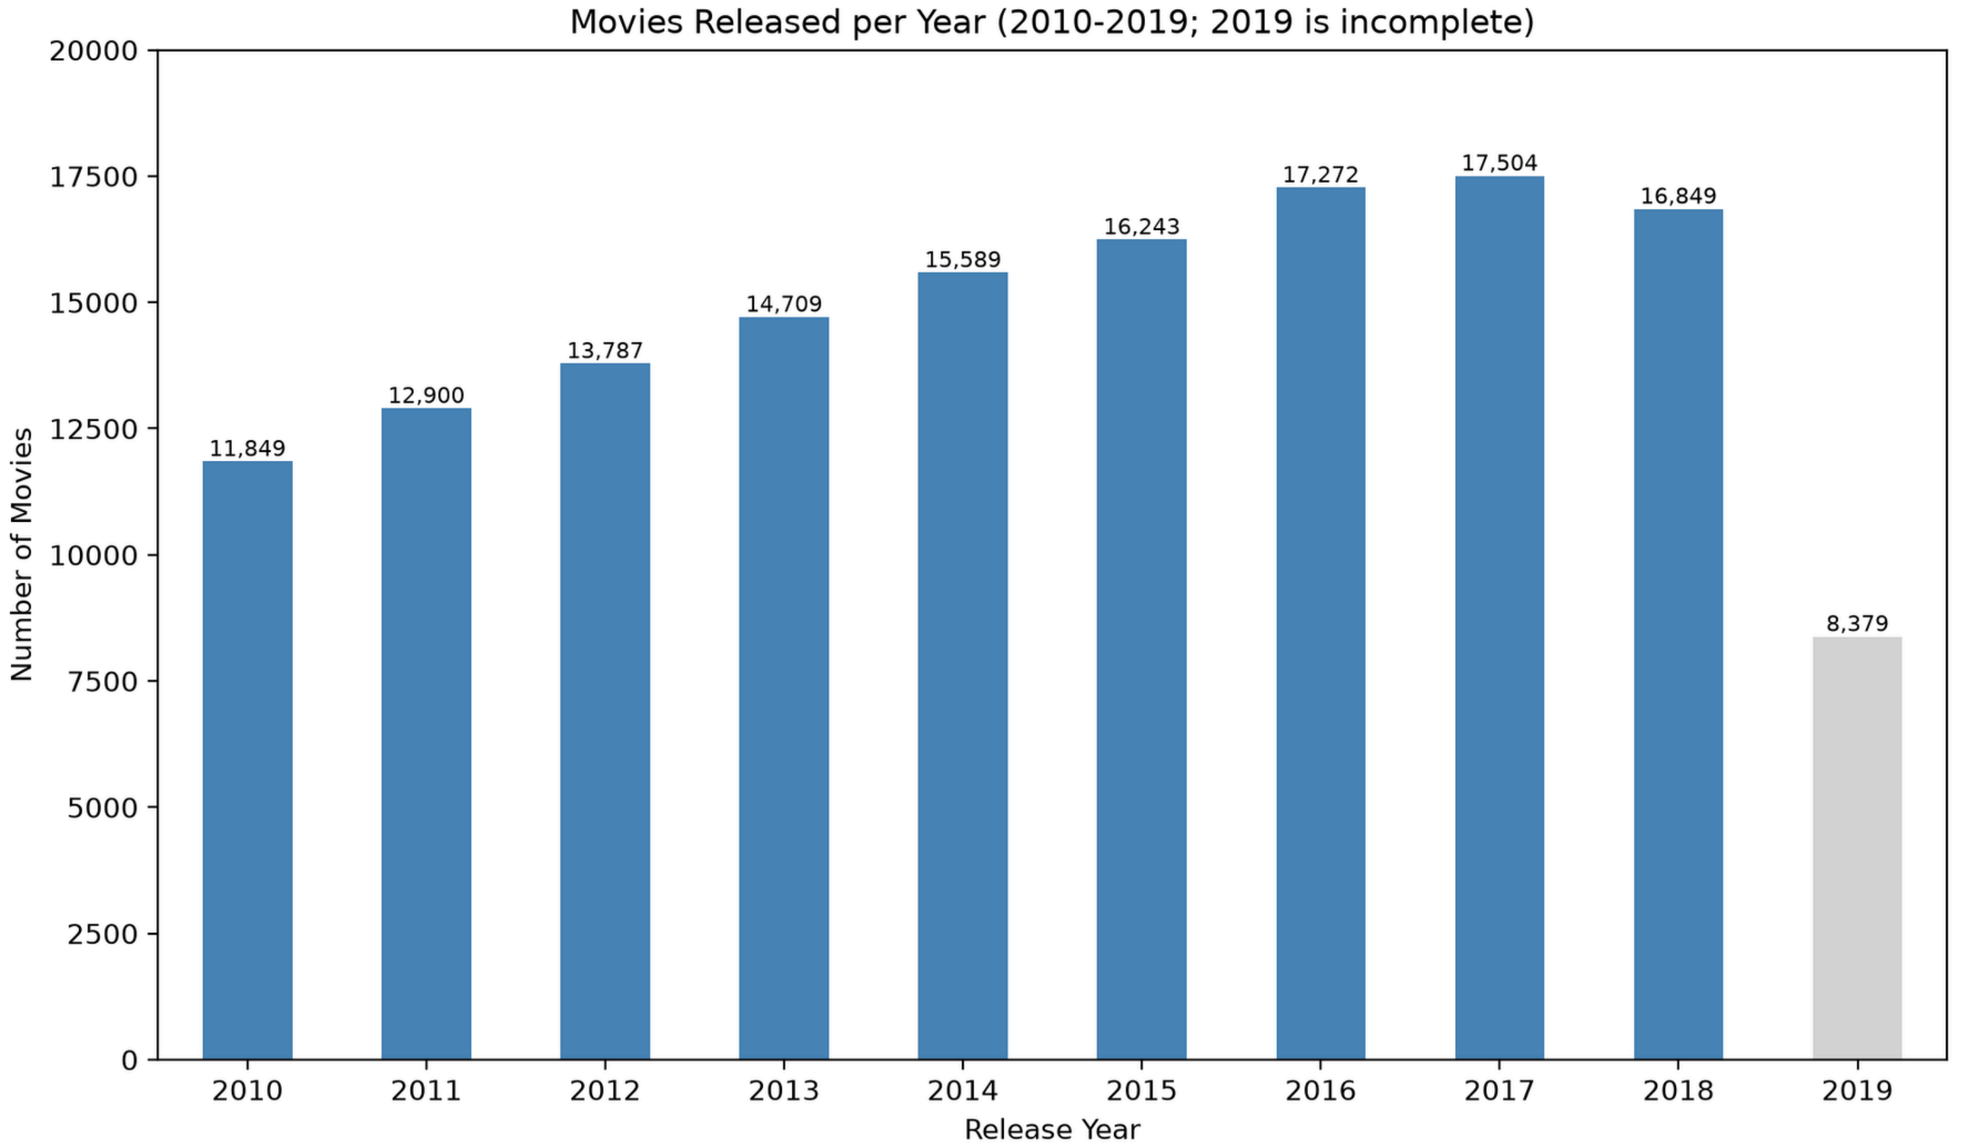

Exploring IMDB movies from 2010 to 2019 with SQL and Pandas

145,081
movies, 2010-2019

73,856
with an IMDB rating

7
data issues to clean

Releases grew until 2017; half are unrated

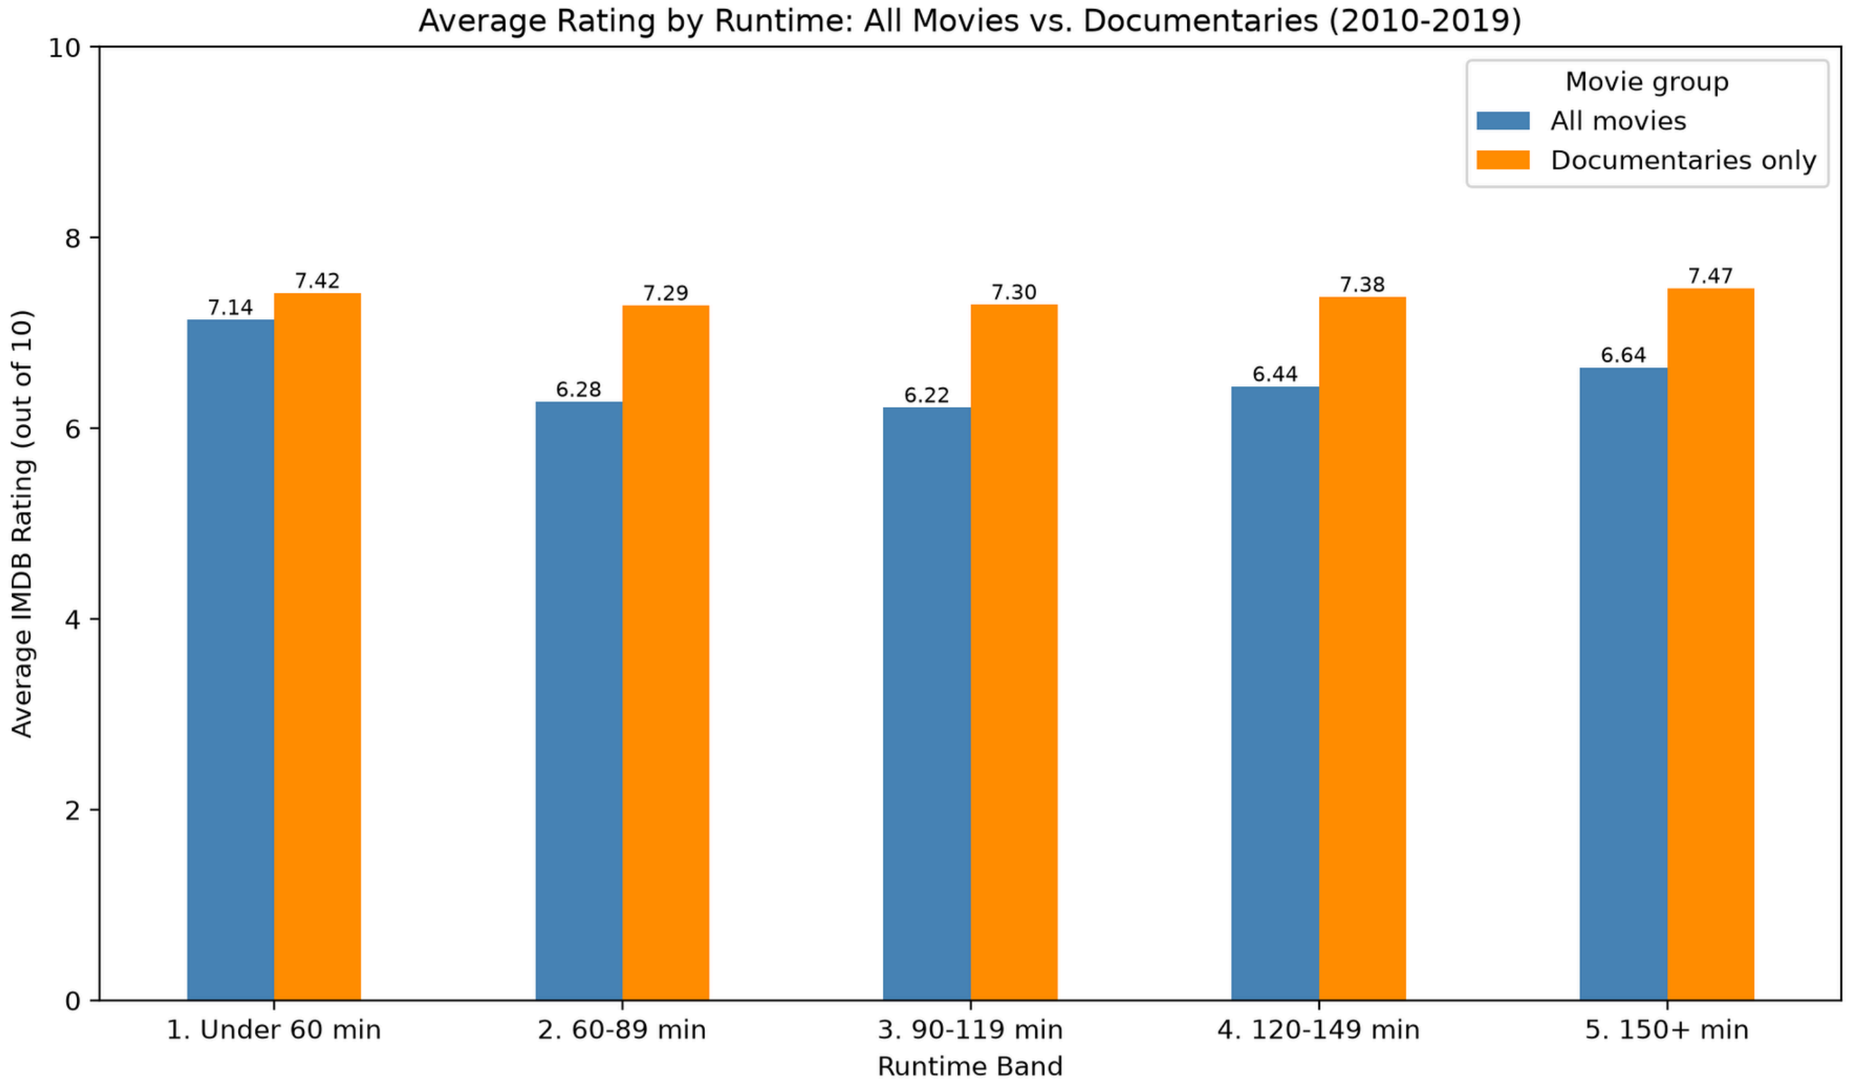

145,081
Movies from 2010 to 2019

51%
have an IMDB rating

21%
are missing a runtime

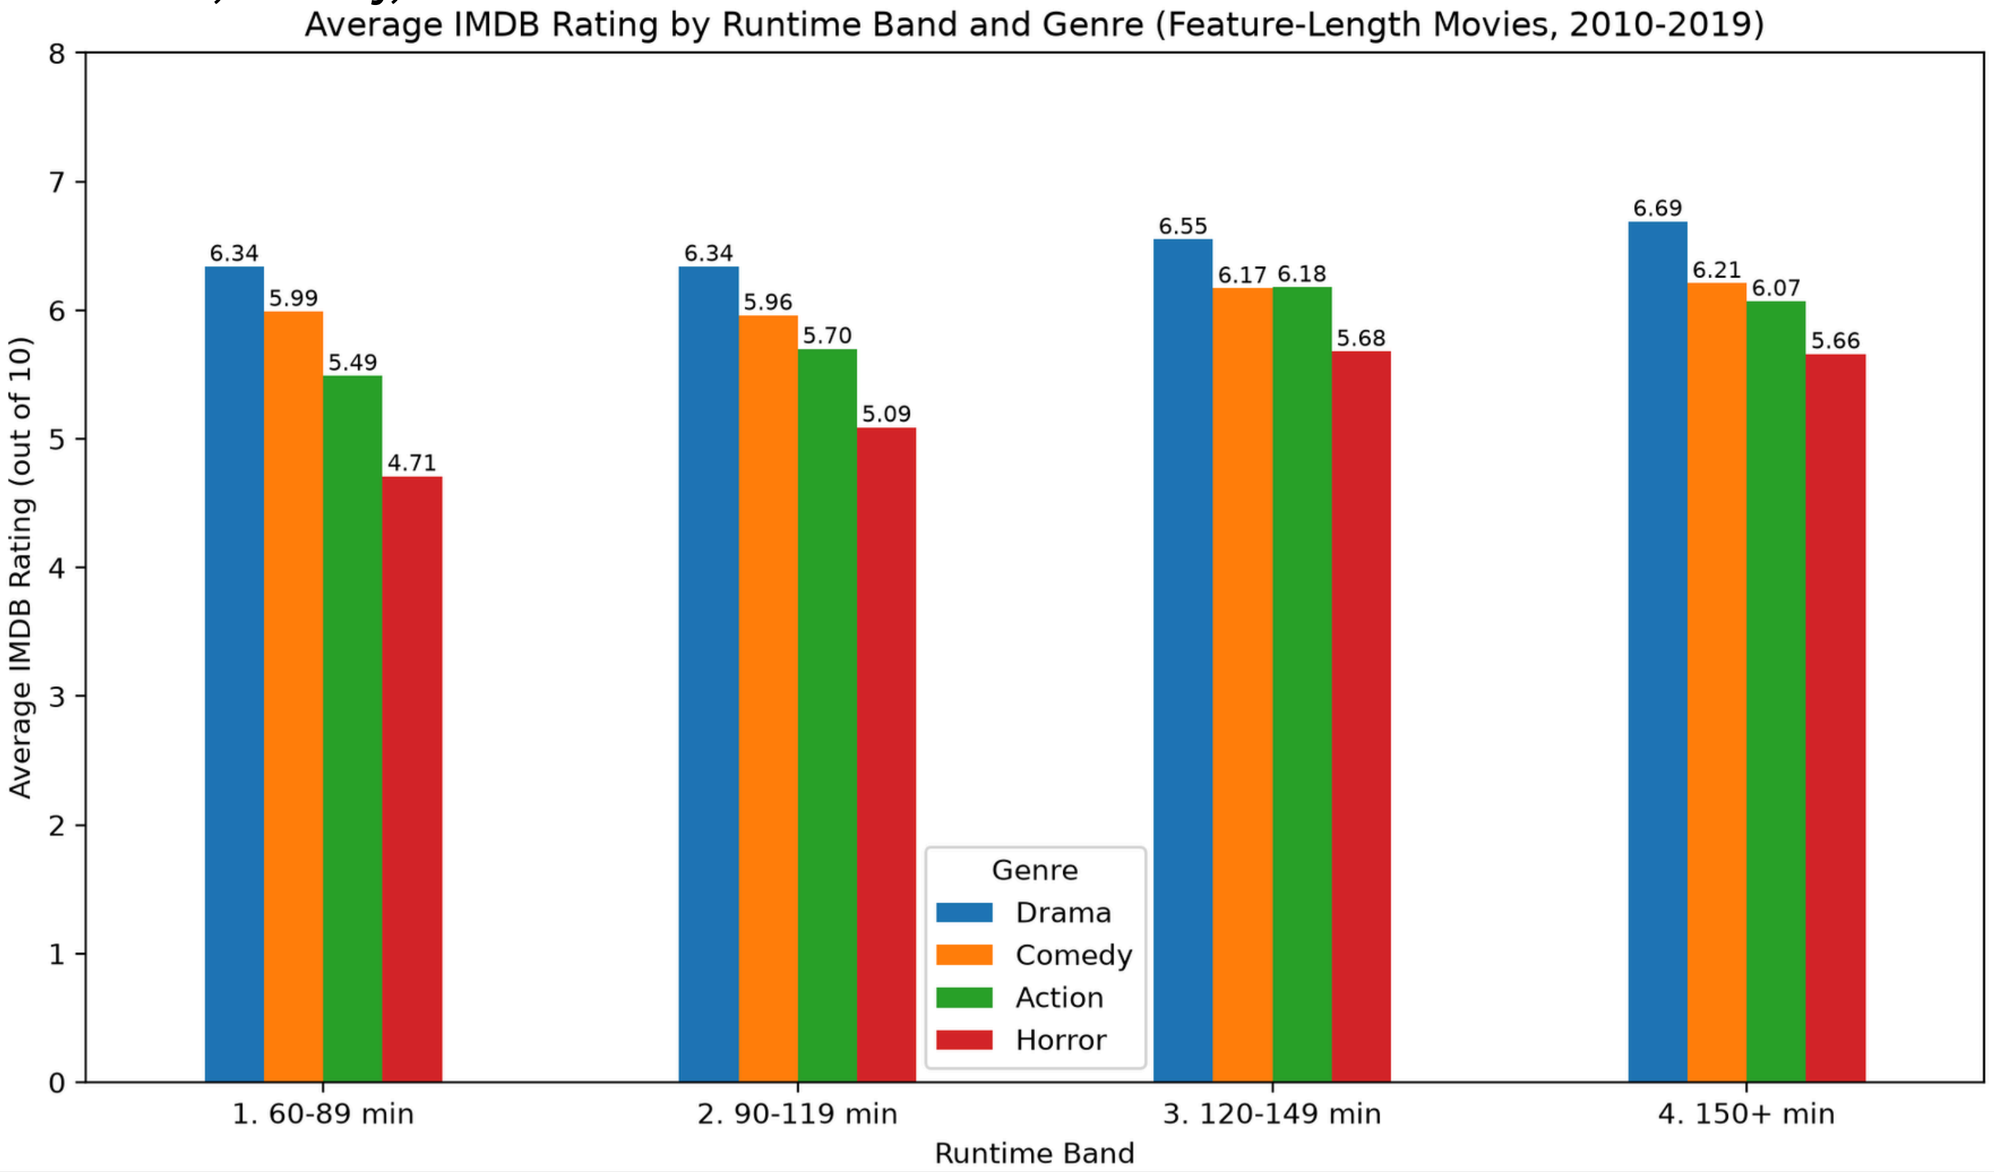

Documentaries lift short-film ratings

7.3 to 7.5
Documentaries score this at every runtime, so films under 60 minutes look best overall.

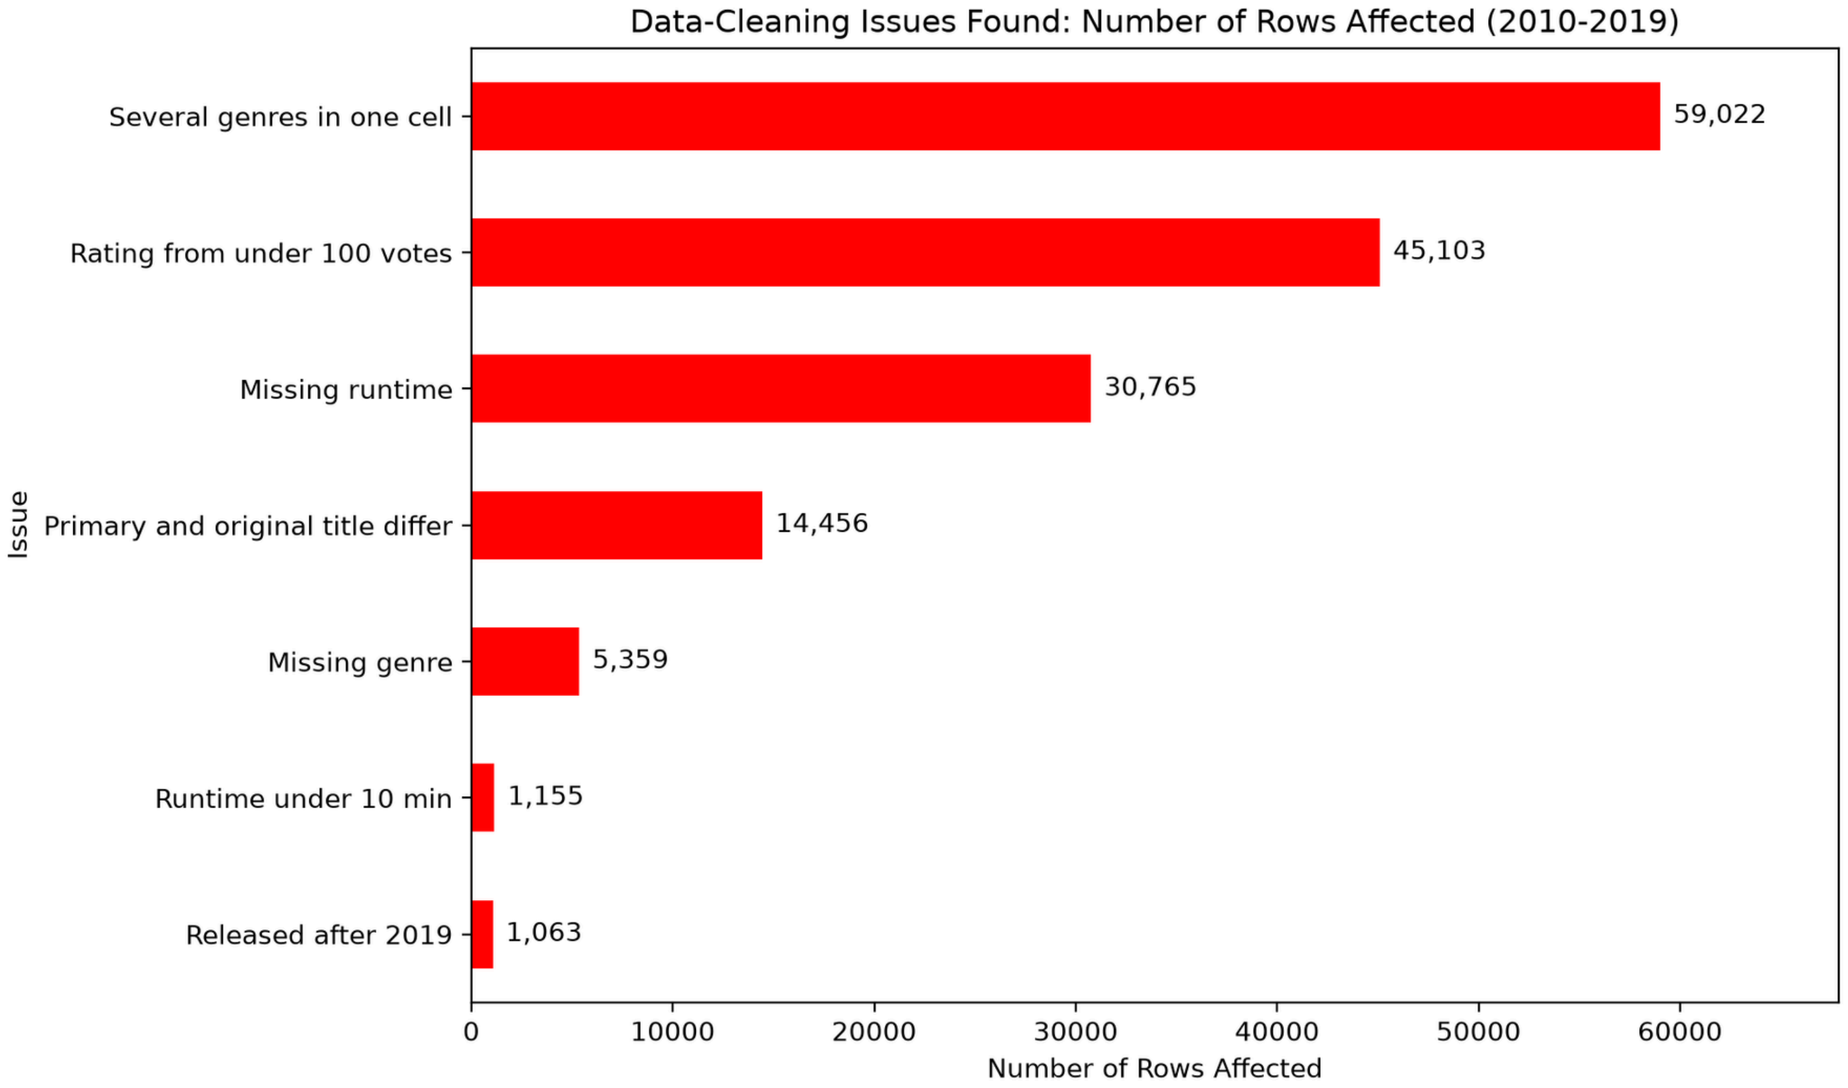

Do longer movies earn higher ratings?

Among feature-length movies (60+ minutes), is there a runtime range that earns higher ratings, and does the pattern hold across Drama, Comedy, Action and Horror?

Longer movies rate higher in all four genres, most of all Horror (+0.95). A first look only, not proof of cause.

Cleaning tasks before deeper analysis

Exclude
Titles after 2019, and missing runtimes or genres

Reshape
Split genres into rows and standardise titles

Filter
Set a minimum vote count and check odd runtimes
